

Case Study

Testing on Vessels

Overview

At any given time, there are approximately 108,000 vessels on the water, these range from Cruise liners to Oil tankers.

There are several types of systems, anchor points and lifting eyes that require testing on these vessels.

Challenges

- The testing requires an element of operatives working at height. The customer is trying to reduce exposure to working at height as part of their H&S commitment.
- Working within strict times restraints due to the sail of the vessels.
- Diversity of applications.

If you have a technical issue with your proof load testing, please get in touch and our team will help you find the right solution.

Solution

As part of the customers ongoing commitment to H&S they have implemented the use of the Hydrajaws Verify app. One operative is conducting the test whilst the second operative is at ground level compiling the results.

The Verify app also allows the customer to produce a report once the testing has been completed speeding up the process significantly.

Our customer gained valuable insight and better understanding of Hydrajaws Products and applications when they visited us at our Tamworth HQ.
